G472 Releasomers™ XK-22 LV.1 Semi-Permanent Solvent Based Mold Release

Major supplier to aviation industry prefers G472 Releasomers™ XK-22 LV.1

A compression molder of pre-preg material had issues releasing parts from their tools. They literally had to scrape and pry off parts. Immediately after switching to G472 Releasomers™ XK-22 LV.1, parts were releasing more easily. They saw a significant increase in parts pulled, with fewer applications of release agent.

This molder switched to G472 Releasomers™ XK-22 LV.1 because:

- Non-silicone.
- Operates above 850°F.
- Multiple releases.
- No build-up on tools.
- Can be wiped or brushed.
- Economical.
- Stoner's industry leading customer service.
