M883 Polyurethane Release

Major manufacturer of bus seating Prefers Stoner® M883 Polyurethane Release

A major manufacture experiencing mold build up and cost issues with their currnt product. Stoner was called to trial M883 to provide a solution to the company's issues.

Item # M883

M883 less mold build up with improved surface finish.

This seat manufacture switched to M883 Release because:

- Less mold build up, improved surface finish on the parts produced.
- No skinning while providing an open cell finish.

Office furniture, auto arm rests, GB Packers Cheese Heads!!! Molders can run more parts without the same wax build up. Works best on molds that are run on lower temperature (less than 125 degrees Fahrenheit) equipment or additional application or spraying systems.
